

Why Toofeze®?

Few things in life are more frustrating than trying to soothe a fussy teething baby. We all feel their pain! **Teething babies instinctively crave cold, smooth, flat objects.** The naturally cool, stainless steel teething surface of Toofeze® is specially designed to draw heat away from sore inflamed gums and to provide an ideal surface to create counter pressure against erupting teeth.

As a Teether

The American Academy of Pediatric Dentistry, Dr Sears, and other experts recommend, among other things, a cool spoon for soothing the sore gums of teething babies. However, spoons are unmanageable for small infants who are just beginning to develop their motor skills. We've just added an ergonomic handle to make it easy for very small infants to control and manipulate. **Caregivers especially like its convenience and practicality!**

Your baby's safety comes first!!! Toofeze® has passed all CSPC, ASTM and CFR toy safety and labeling regulations. The materials, silicone and stainless steel, used to make Toofeze® are also used to make kitchen utensils and hospital equipment. Toofeze® is manufactured in China, and Oh, That Baby! Ltd. has contracted with an independent U.S. laboratory to conduct random testing to ensure these regulations are consistently met.

As a Keepsake

Toofeze® is also designed to become a lasting keepsake. Just take it to your local **rotary engraver** to have the disk personalized. We have included recommended engravings on our purchasing page. It comes with a drawstring bag for safekeeping and a teething chart to record baby's teething progress.
